OM - Facebook Ad	50	2000 €
Set up tool stack	40	1600 €
Website launch QC	30	1200 €
GDPR set up	20	800 €

What is a sprint velocity?

Velocity is a measure of the amount of work a Team can tackle during a single **Sprint** and is the key metric in Scrum. **Velocity** is calculated at the end of the **Sprint** by totaling the Points for all fully completed User Stories.

Its purpose is to help the team estimate team performance. The chart lets you visualize the overall status of a project, and how much work your Agile team can complete in future **sprints**. A **velocity** chart is a graph that lets you easily see estimated story points against actual, completed story points.

Ancienne base de calcul:

Une 1/2 journée de travail équivaut raisonnablement à 10 pts de production livrable pour le client.

(c'est à dire 10 pt pour notre sprint velocity interne)
